

## Version History

1.0 Original version.

## 1. Request

The request should be POSTed (**NOT** GETed) to the above URL.

Required variables are in **bold**.

Optional variables are in *italics*.

Variable Name (case insensitive)	Type	Max. Length	Description
<b>loginName</b>	string	64 chars	Account Username (case sensitive)
<b>loginPassword</b>	string	128 chars	Account Password (case sensitive)
<b>orderNumber</b>	integer		The Order Number for which you want to remove a domain.
<b>domainName</b>	string	255 chars	Fully-qualified Domain Name

## 2. Response

The MIME type will be `application/x-www-form-urlencoded`, because the format of the response will be the same “URL-encoded” format as the request (e.g. `name1=value1&name2=value2`).

Here are the names of the various variables that will or may appear in the response:

Variable Name (case insensitive)	Type	Description
<b>errorCode</b>	integer	Error code (see list below for possible values)
<i>errorMessage</i>	string	Explanation of error

Here are the possible values for “errorCode” and “errorMessage”:

errorCode	errorMessage
0	Successful
-1	Request was not made over HTTPS!
-2	'xxx' is an unrecognized argument!
-3	The 'xxx' argument is missing!
-4	The value of the 'xxx' argument is invalid!
-14	An unknown error occurred!
-16	Permission denied!
-17	Request used GET rather than POST!
-18	Cannot remove domain as the order must contain at least one domain.
