Version History

1.00   Original version. Free 1yr HackerGuardian and HackerProof offers.

1. Request

The request should be POSTed (rather than GETed) to the above URL.

Required variables are in **bold**.
Optional variables are in *italics*.

Variable Name (case insensitive)	Type	Max. Length	Description
loginName	string	**64** chars	Account Username (case sensitive).
loginPassword	string	**128** chars	Account Password (case sensitive).
orderNumber	string	**128** chars	The Order Number for an SSL Certificate which qualifies for the Free Upgrade offer.
offerCode	string	**64** chars	The required offer. Allowed values are: **FREE_HG_UPGRADE** = Free 1yr HackerGuardian offer. **FREE_HP_UPGRADE** = Free 1yr HackerProof offer.
sendConfirmationEmail	integer		**0** = Don't send an Order Confirmation Email. **1** = Send an Order Confirmation Email to the Applicant (i.e. the Web Host Reseller). **2** (the default) = Send an Order Confirmation Email to the Customer (i.e. `customerEmailAddress`). **3** = Send an Order Confirmation Email to both the Applicant and the Customer.
isReturningCustomer	char		**Y** = An account identified by `customerLoginName` already exists and should be reused. **N** (the default)= A new customer account is required.
customerTitle	string	**64** chars	The customer's title (e.g. Mr, Mrs, Dr, etc).
customerForename	string	**64** chars	The customer's first name.
customerSurname	string	**64** chars	The customer's last name.
customerEmailAddress	string	**255** chars	The customer's email address.
customerTelephoneNumber	string	**32** chars	The customer's telephone number.
customerFaxNumber	string	**32** chars	The customer's fax number.
customerLoginName	string	**64** chars	The customer's username (case sensitive).
customerLoginPassword	string	**128** chars	The customer's password (case sensitive).

Note 1: Before you can use this API, your Web Host Reseller account must also have Reseller capabilities.

2. Response

The MIME type will be `application/x-www-form-urlencoded`, because the format of the response will be the same "URL-encoded" format as the request (e.g. name1=value1&name2=value2).

Variable Name (case insensitive)	Type	Description
errorCode	integer	Error code (see list below for possible values).
orderNumber	string	The Order Number for the Free offer (if it was granted). This will normally be the same as the original Order Number with "hgup" or "hpup" appended.
errorMessage	string	Explanation of error.
errorItem	string	The problematic request parameter (this is relevant to errorCode -2, -3 and -4).

Here are the possible values for "errorCode" and "errorMessage":

errorCode	errorMessage
0	Successful
-1	Request was not made over HTTPS!
-2	*'xxxx'* is an unrecognized argument!
-3	The *'xxxx'* argument is missing!
-4	The value of the *'xxxx'* argument is invalid!
-14	An unknown error occurred!
-16	Permission Denied for *<reason>*! Contact Support
-17	Request used GET rather than POST!
