

Web Backup

Daily backups and one-click restore allow to never lose data again when solving any website emergency.

Nothing offers more relief than to be able to turn back the hands of father time and restore files and databases with a moment's notice. Websites are expected to be up at all hours of the day. It is in fact the lifeline to a brand. The minute that it's unavailable, there is an immediate experience in loss of brand power, visitor trust and even revenue. All websites at some point in time will suffer from crashed servers, infections, user error, bad updates or bad actors. Having a secure, reliable and accessible website copy is essential.

PURPOSE BUILT

A sophisticated version control software, providing incremental agent-less backups to oversee a network of any mix of CMS websites - all in one place.

SECURITY, SPEED AND SIMPLICITY

With various user options such as automatically scheduled backup & restore or selectively restoring certain files and folders; Sectigo Web Backup provides control, flexibility and reliability with 256-bit encryption.

WEB BACKUP COMPATIBILITY

Works with all popular content management systems (CMS)

WEB CLEAN BENEFITS

- ✓ Nothing to install – done via Secure FTP
- ✓ One - click restores
- ✓ Incremental backups to minimize disk space usage & costs
- ✓ Independent Offsite Backups providing added security
- ✓ Email, chat and phone support

COMPLETE RECOVERY SOLUTION

An independent off-site backup solution for websites. With automated daily backups, using Web Backup means deleted files are now recoverable, overwritten files are now obtainable, and if a site is hacked, the malware is easily removable. All on-demand with a single click.

■ FILE CHANGE MONITORING

Monitors backed up websites for changes daily and proactively alerts users to any additions, deletions or changes to help identify unauthorized or unintentional changes.

■ RELIABILITY

Automatically detects databases for popular CMS systems and attempts to automatically connect and take backups. For any other databases, backups can be configured manually by providing connection credentials and information.

■ BUILT-IN SECURITY

Stores backups on Amazon S3 for rock solid reliability and durability, protected with AES-256 server-side encryption.

■ ONE-CLICK DOWNLOAD & RESTORE

Mistakes happen. One-click restore saves you time and heartache by getting your site back to where it was before the issue occurred.
