

Web DNS

Ensure uptime, to all your worldwide users, with global Anycast DNS featuring blazing fast resolutions, near real-time update propagation, and an enterprise security-first posture.

The Domain Name System (DNS) locates the IP address of a domain name in order to display the website to the user requesting it. It is a globally distributed directory that 'resolves' domain names into IP addresses. The quicker it executes this resolving process, the quicker a website is uploaded. And just like a phone directory matches human names with phone numbers, the DNS links domain names to IP addresses of websites thus containing sensitive data belonging to website domain names. That's why it's so vulnerable to being attacked by hackers and malware viruses!

INCREASE ACCESSIBILITY

Forget about downtime and performance issues - our Anycast network has multiple geographically dispersed servers that reroute traffic from any POPs when there are issues that impair performance. Our goal is to provide the highest SLA when possible.

HIGH PERFORMANCE

Setigo Web DNS is designed for the most demanding applications and the websites that love them. It leverages the strength and design of our network infrastructure to deliver the highest performance and minimize operational challenges as well as business risk.

WEB DNS COMPATIBILITY

Works with all popular content management systems (CMS)

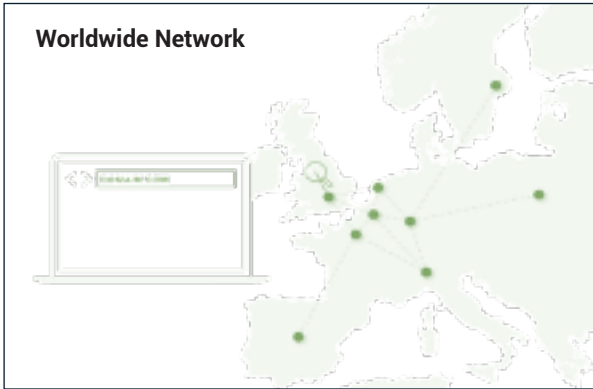

WEB DNS BENEFITS

- ✓ Speed Boost
- ✓ Improved Reliability
- ✓ Near real-time propagation
- ✓ Network-Wide DDoS protection
- ✓ Guaranteed 100% Uptime
- ✓ Automated Scaling
- ✓ Redundancy and Optimization with infinite routing options

GLOBAL ANYCAST PERFORMANCE

The Unicast protocol lacks the ability to mitigate DDoS attacks globally, has lower DNS latency across countries or simply to make the proper load balancing in multiple locations. Sectigo Web Anycast DNS is your ticket for speed and reliability! We maximize the speed, minimize downtime and provide the highest possible SLA for each of our global locations. Have full redundancy and reliability without compromising.

SMART ROUTING

Customized network and computing hardware within every Point of Presence (PoP) will automatically route to the most optimal DNS server at lightning speeds.

LOAD BALANCING AND FAILOVER

Offer failover and disaster recovery by rerouting traffic if network infrastructure fails during a disaster. Intelligent traffic management and seamless handoffs minimizes, if not eliminates, bottlenecks and any downtime.

DDoS PROTECTION

Built in security hardened by platform wide security protects all Sectigo Web services by default from Level 3 through 5 DDoS attacks.

IPv6 SUPPORT

Sectigo Web DNS provides IPv6-compliant Recursive DNS.

Product Package	Pro	Premium	Enterprise
Number of DNS Zones Covered	1	Unlimited	Unlimited
Global Anycast Network	Yes	Yes	Yes
Unlimited DNS Zones	Yes	Yes	Yes
Unlimited DNS Records	Yes	Yes	Yes
Network Layer DDoS Protection	Yes	Yes	Yes
DKIM Record	Supported	Supported	Supported
DMARC Record	Supported	Supported	Supported
SPF Record	Supported	Supported	Supported
Analytics	Included	Included	Included
SLA	99.99%	99.99%	99.99%
# of Queries / month	1 Million	3 Million	3 Million
<i>Suggested MSRP</i>	\$99 / year	\$199 / year	\$299 / year
