Sectigo Web Remediate Plan
The Hacked Website Solution

Perhaps you noticed unwanted spammy links, a sudden fall in traffic, irregular server usage or maybe an unhappy customer sent an email because they've been redirected to another site. When it comes to fixing your website, you really only have two options: Fix it yourself or hire someone to fix it. Repairing your own website requires some technical cyber knowledge and often times fixing the visible issues don't even repair the core problem.

The Complete Repair

Sectigo Web Remediate Plan is an automated website repair solution that not only fixes the effects of a hack but repairs the root cause when applicable and then backups a clean copy for future use. Whether it's a plugin conflict, broken themes disrupting normal site activity, malicious hidden codes wreaking havoc or causing blacklisting by search engines, the Sectigo Web Remediate Plan has the tools to help restore websites, completely and quickly.

Every website is a target

Regardless of a website's size or purpose, all are susceptible to plugin conflicts, automated bad bot attacks, or any complex technical issue caused by nefarious online actors.

17.6M
websites have **malware** at any given time

2,354
average **bot visits** per site per week

62
attacks per day per average site

$150
is the average cost per stolen record
